Trade Analytics with your MT5 account

A breakdown of where your account makes and loses money, your days closest to a prop limit, and an account review you can save as PDF or share as a link.

What you need

- MetaTrader 5 on a computer (Windows or Mac). The phone app cannot save reports.
- A browser: Chrome, Edge, Safari or Firefox.
- No sign-up and no password. Your MT5 password is never asked for.

Steps

1 **Save your history from MT5**

In MetaTrader 5 open the Toolbox window (Ctrl+T) and go to the **History** tab. Right-click the list, choose **Positions** and the period you want, for example **All History**. Right-click again, choose **Report**, then **HTML**, and save the file.

2 **Open Trade Analytics**

Go to **kalibremarkets.com/lab/analytics**. Drop the saved file on the box, or click it to choose the file.

3 **Set the server time**

Under the box, set **Server time (UTC offset)** to your broker's server time. MT5 shows it in the Market Watch window. The hour, weekday and session results use it.

4 **Read the overview**

Net P&L, win rate, profit factor and drawdown at the top. Below: results by symbol, opening hour, weekday, session, direction, holding time, trade size, the trade after a loss and losing streaks.

5 **Check a prop limit**

If the account is a prop challenge, pick the firm's rules in **Prop limits**. You see each day's distance to the daily and total floor.

6 **Ask a question**

In **Your own view**, type a question such as *worst 5 symbols* or *net by hour*. The table or chart appears below it, and you can save the view.

7 **Keep or share the result**

Click **Open the report page**. Save it as PDF with the browser's print menu, or click **Share a read-only link** to get a link that opens for 30 days.

What you will see

- Account overview with the balance curve.
- Segments that cost money, sorted by size.
- Prop limit days, if you pick a firm.
- An account review page to keep.

Good to know

- The report's account number and name are not read.
- Only closed positions are analysed. Open positions are not in an MT5 history report.
- Results describe the past and say nothing about future trades.

Optional: what if you had held

Trade Analytics can follow every trade past your exit: what it would be worth now, whether a loser came back to breakeven, and when the account would have hit the prop floor with everything kept open. It needs the prices after your trades, which the Kalibre History Export script writes from your own MT5.

1 **Download the script**

Download **KalibreHistoryExport.ex5** from this link.

2 **Copy it into MT5**

In MetaTrader 5 choose **File → Open Data Folder**, open **MQL5**, then **Scripts**, and copy the file there. In the Navigator (Ctrl+N) right-click **Scripts** and choose **Refresh**.

3 Run it once

Drag **KalibreHistoryExport** onto any chart. It writes two files to **MQL5 → Files → Kalibre** in the same data folder: **kalibre-history** (your trades) and **kalibre-prices** (prices, lot values, swaps and the stop-out level).

4 Drop both files

Drop the history file in Trade Analytics as usual, then choose the price file in **What if you had held**. Without the script, click **Use ECB daily rates**: currency pairs only, one price a day, no swaps.
